

# CS180 - Google Keep

## Overview

Our project, Google Keep, is a web application that will be built using ReactJS. Firebase will be our database and Styled Components will be used to create the UI/UX of our application.

Our application will allow users to create and archive cards to write notes, add images, and make checklists. Users will have the option of adding and sharing notes with other users. Users will login to Google Keep via their Gmail account.
